UltraFlat Maple™

The **UltraFlat Maple** is constructed of 7 plies of precision-cut, uniformly dried veneer resulting in greater uniformity between plies and overall improved flatness and stability.

Since its introduction in 2006, continuous improvement has allowed UltraFlat Maple to dominate the market with its reputation as the flattest Maple dieboard available.

Microwave “RF” pressing drives out moisture from within while curing the new non-formaldehyde “green” PVA adhesive. This allows improved air quality for anyone handling the board.
